

## INVESTIGATION OF THE PHARMACOLOGICAL ACTIVITY OF ETHANOLIC EXTRACT OF *ABRUS PRECATORIUS* SEEDS

*Bull. Pharm. Res.* 2015;5(1):28-30.

The ethanolic extract of the *Abrus precatorius* seeds was evaluated for possible bronchodilator activity by using various in vivo and in vitro models in guinea pigs. Animal studies involved the use of histamine induced broncho-constriction in guinea pigs. Results showed reduced activity at lower concentration but significant protection at higher doses.
